Traditional ceiling:
Limited coverage and diffusion.

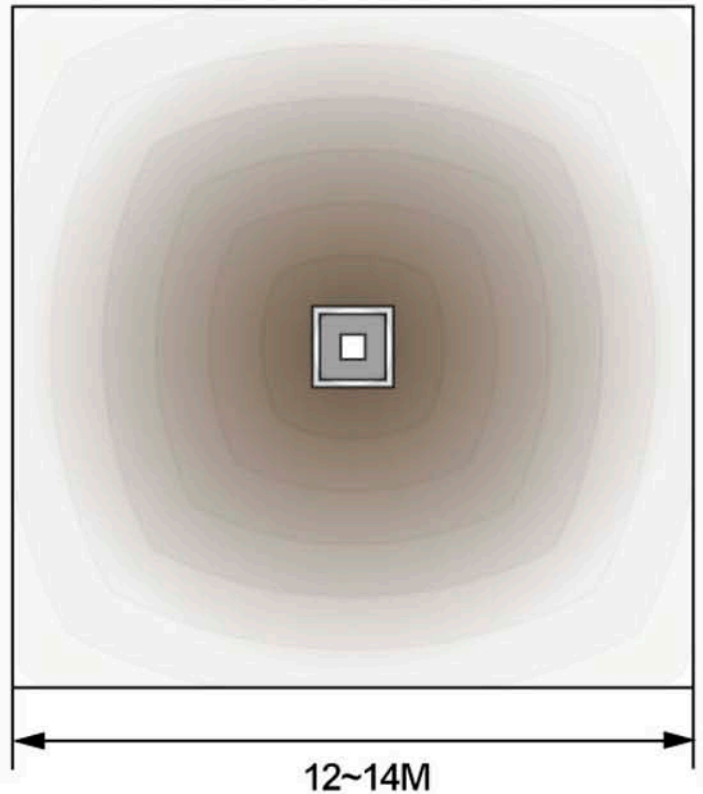

Drop ceiling speaker: Huge coverage and great diffusion for the full range of music.

Traditional ceiling speaker arrangement and its coverage

The innovative design of Square that substantially increase the diffusion and coverage

Save works when renewing ceiling tile

The life cycle of the usual ceiling tile is 4~5 years. It will get dirty and weak when getting old and the speakers on it may have the potential risk of falling. When renewing the ceiling, you have to remove the speakers and re-install them on the new tile if you choose them as your music/PA speaker. The Square installs on the ceilingframe which is the strongest part of the suspended ceiling. With this design you can wave all these concerns aside.

Four Independent cabinet design that helps to avoid interference and dust
